

Pitch Deck:

ZSWatch/ZSWatch

ZSWatch - the Open Source Zephyr™ based Smartwatch,
including both HW and FW.

Executive Summary

ZSWatch is an ambitious open source smartwatch project built entirely from scratch, encompassing both hardware and firmware, leveraging the robust Zephyr RTOS and Nordic nRF5340 SoC. The project aims to disrupt the closed ecosystem of commercial smartwatches by providing a fully transparent and customizable platform for developers, hobbyists, and privacy conscious users. With an active development kit WatchDK and an innovative application framework, ZSWatch is positioning itself as the leading open source alternative in the wearable technology market, backed by strong technical foundations and community driven innovation.

Overall Investability Score: 7.8/100

Market Fit: 7/100 | Tech: 9/100 | Innovation: 8.5/100

ZSWatch The Open Source Zephyr Smartwatch

ZSWatch is defining the future of transparent and customizable wearable technology.

Notes: Good morning. We are here to introduce ZSWatch, a groundbreaking open source smartwatch project. Our vision is to empower users and developers with complete control over their wearable technology.

The Problem With Smartwatches Today

Current smartwatches are closed ecosystems, limiting user freedom, data privacy, and developer innovation. Existing open source alternatives often lack the polish and functionality required for practical use.

Notes: The current market is a walled garden. Users are locked into proprietary systems with limited customization, and their data is often harvested without full transparency. Developers struggle to build and deploy innovative applications.

ZSWatch A Fully Open and Customizable Platform

ZSWatch provides an entirely open source hardware and firmware platform, built on the Zephyr RTOS and nRF Connect SDK. It features a robust application framework, extensive sensor integration, and broad smartphone compatibility. We offer the WatchDK development kit to foster innovation.

Notes: Our solution is transparency and control. We provide all hardware designs and firmware source code, enabling deep customization. Built on Zephyr, it ensures high performance and modularity, and our dev kit makes it accessible for anyone to get started.

Target Market Open Hardware Enthusiasts and Developers

We target a growing global community of embedded developers, DIY enthusiasts, educators, and privacy conscious consumers. This niche is passionate about technology, eager for customization, and seeks transparent solutions.

Notes: While initially a niche, our market is highly engaged and influential. These early adopters are not just consumers; they are builders, evangelists, and potential contributors. Education and industrial use cases also represent significant growth opportunities.

Technical Excellence Powered by Zephyr and nRF5340

Our robust architecture features the dual core Nordic nRF5340 SoC, Zephyr RTOS, LVGL for UI, comprehensive sensor suite (IMU, pressure, light, mic), and versatile BLE (ANCS, AMS, GadgetBridge). Modular apps, a Zbus event system, and Python-based hardware testing ensure reliability and extensibility.

Notes: Our technology stack is cutting edge and well-architected. The nRF5340 provides the horsepower, Zephyr the embedded operating system, and LVGL a flexible UI. We prioritize modularity, event driven architecture, and rigorous testing for a stable and extensible platform.

Business Model Developer Kits and Community Growth

Our current revenue is generated through sales of the WatchDK development kit. Initial funding from NGI0 Commons Fund validates our mission. Future plans include premium features, enterprise support, and strategic partnerships, all while leveraging community contributions.

Notes: Our strategy is to build a vibrant ecosystem around our development kit. By empowering developers, we cultivate innovation and a loyal community. Grants provide foundational support, and we envision expanding into value added services and perhaps even a consumer product through crowdfunding.

Unmatched Openness and Developer Focus

ZSWatch distinguishes itself with full hardware and software transparency under GPL-3.0. Our Zephyr RTOS foundation provides enterprise grade capabilities, and the WatchDK facilitates unparalleled ease of development for custom applications, fostering a strong, engaged community.

Notes: No other project offers this level of openness and control. Our strong foundation in Zephyr, combined with a developer friendly hardware platform, sets us apart. We aren't just selling a product; we're providing a platform for innovation.

Join the Open Smartwatch Revolution

ZSWatch is more than a product; it is a movement towards truly open and customizable wearables. We invite you to explore our WatchDK, contribute to our community, and help us redefine the future of smartwatches. Find us at zswatch.dev.

Notes: We believe in a future where technology is open, accessible, and controlled by its users. Join us in building that future. Visit our website, order a WatchDK, and become part of the ZSWatch community.
